## The wine year 2023

2023 was a challenging year for all of us: constant rain, hail, periods of extreme heat and violent summer storms. The 2023 wine year began with a very dry winter. In March, our forests were tended and pruned, as well as new trees were planted. In April, we spread compost and compost preparations. The weather was moderate and we were satisfied. Then the weather changed in May. This resulted in heavy rain which caused massive landslides in the whole region. These cool and rainy temperatures lasted until June, delaying flowering. The weather hardly stabilized in July either, as the high humidity and hot days brought the first major hailstorms. By August, we were already counting over 1100 liters of rain per square meter. In September, the weather eased a little and we were able to start harvesting on September 18 in glorious late summer weather. Despite the challenging weather, we are more than happy with our harvest. In the 13 days of harvesting, our 400 hands may have harvested less than in the previous year, but the quality was outstanding: beautiful small-berried grapes with ideal ripeness and good acidity structure. A proof that the biodynamic cultivation of our vineyard is the right approach.
